

## The First 1500 km/1000 Miles

The more cautiously you treat your engine during the break-in period, the more satisfied you will be with its performance later on. Therefore, drive your vehicle during the first 1500 km/1000 miles at moderate vehicle and engine speeds.

During this period, avoid heavy loads (full throttle driving) and high RPMs (no more than  $\frac{2}{3}$  of maximum permissible speed in each gear).

Avoid accelerating by kickdown. It is not recommended to brake the vehicle by manually shifting to a lower gear. We recommend to select positions "S" or "L" only at moderate speeds (for hill driving).

After 1500 km/1000 miles speeds may gradually be increased to the permissible maximum.

## Special Operating Conditions

### Winter Driving

Have your car winterized at an authorized MERCEDES-BENZ dealer before the onset of winter.

- Engine oil change: If "year-round" multigrade engine oil is not used, be sure to use an SAE grade based on ambient temperature. For recommended engine oil viscosities refer to "Fuels, Coolants, Lubricants, etc." and last page.
- For diesel fuels, refer to page 89 and last page.
- Anticorrosion/antifreeze in the coolant: Check anticorrosion/antifreeze protection periodically. For capacity refer to "Fuels, Coolants, Lubricants, etc.".

- Additive in the windshield washer system: Add windshield washer solvent to the water in the windshield washer system.
- Test battery: Battery capacity drops with decreasing ambient temperature. A well charged battery ensures that the engine can always be started, even at low ambient temperatures.
- Tires: We recommend M + S radial tires on all wheels for the winter season. Observe permissible maximum speed for M + S radial tires and the legal speed limit.
